

# **MODIS STATUS OVERVIEW**

by

**Vincent V. Salomonson  
MODIS Science Team Leader  
and  
Jack Xiong  
MODIS Project Scientist**

**VIIIRS/MODIS Science Teams Meeting  
Hilton BWI Airport  
May 14, 2008**

## MODIS IS ON THE EOS TERRA AND AQUA MISSIONS

**Terra Launch: Dec. 18, 1999**

**First Image: Feb. 24, 2000**

**(over 8+ years of operation as of April 2008)**

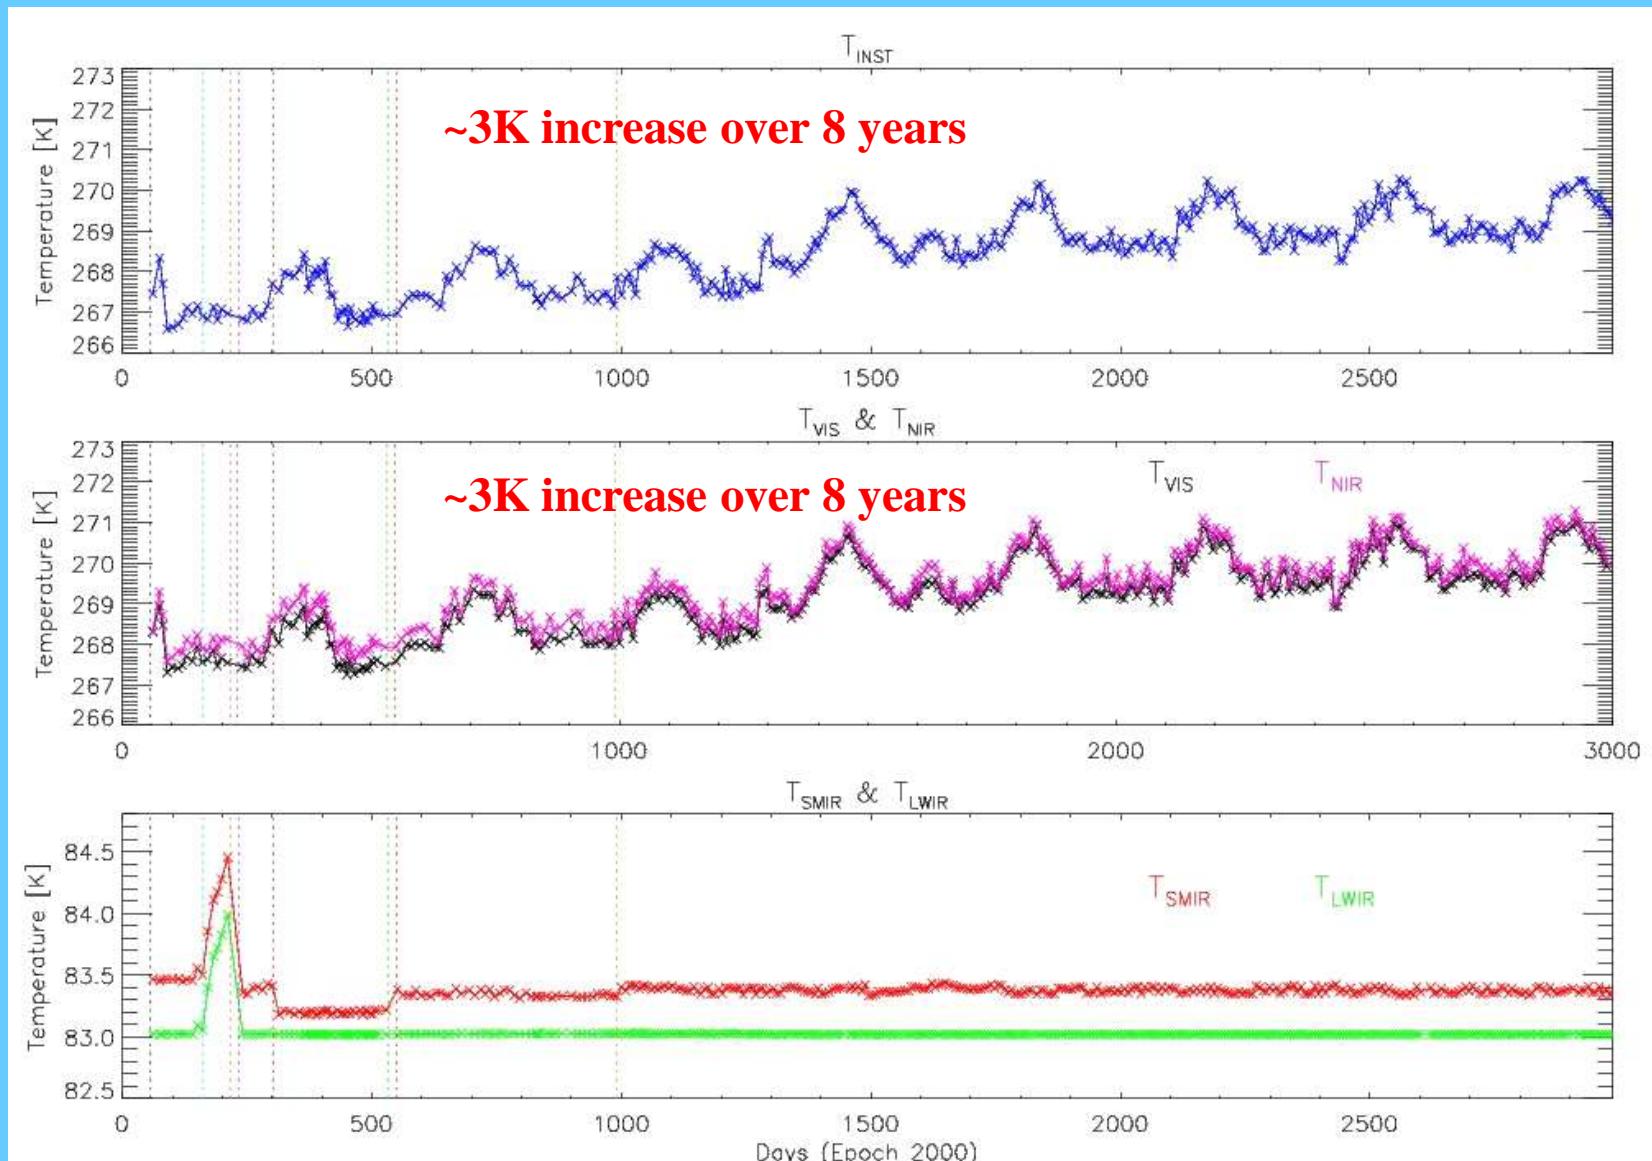

**Aqua Launch: May 04, 2002**

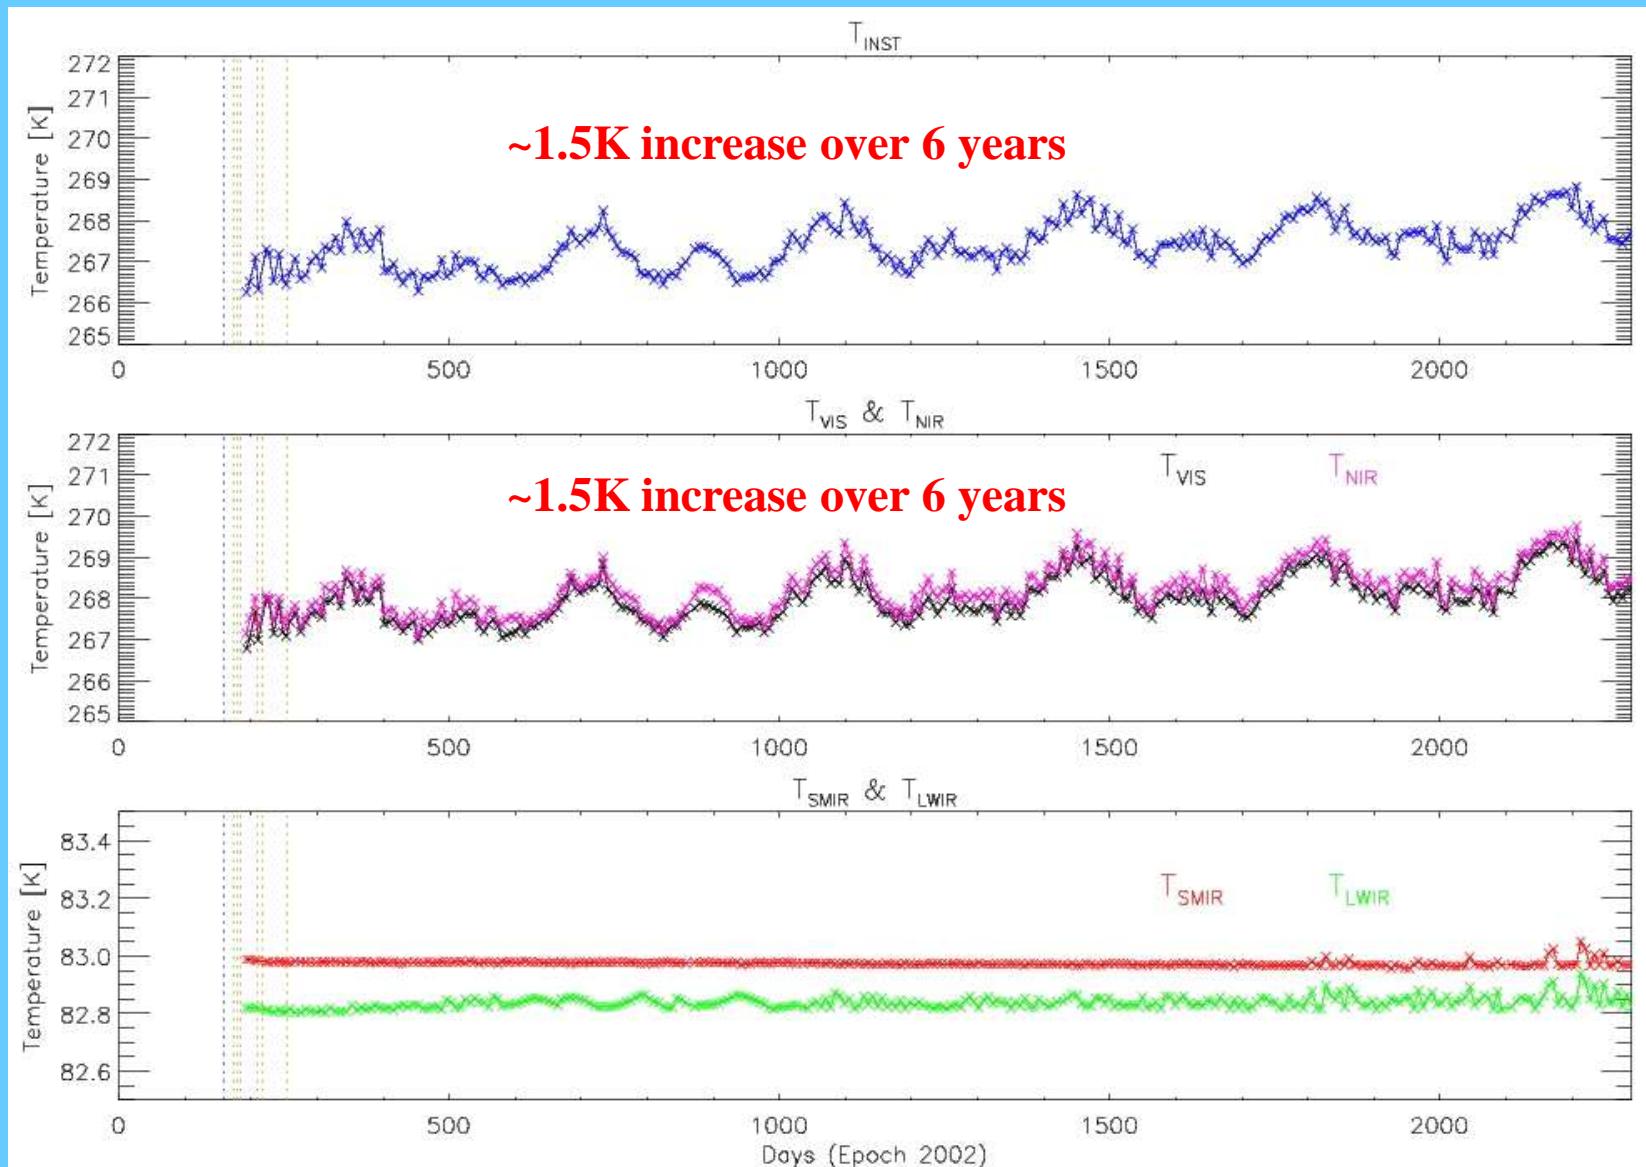

**First Image: June 26, 2002**

**(~ 6 years of successful operations)**

# Terra MODIS Spectral Characterization Results

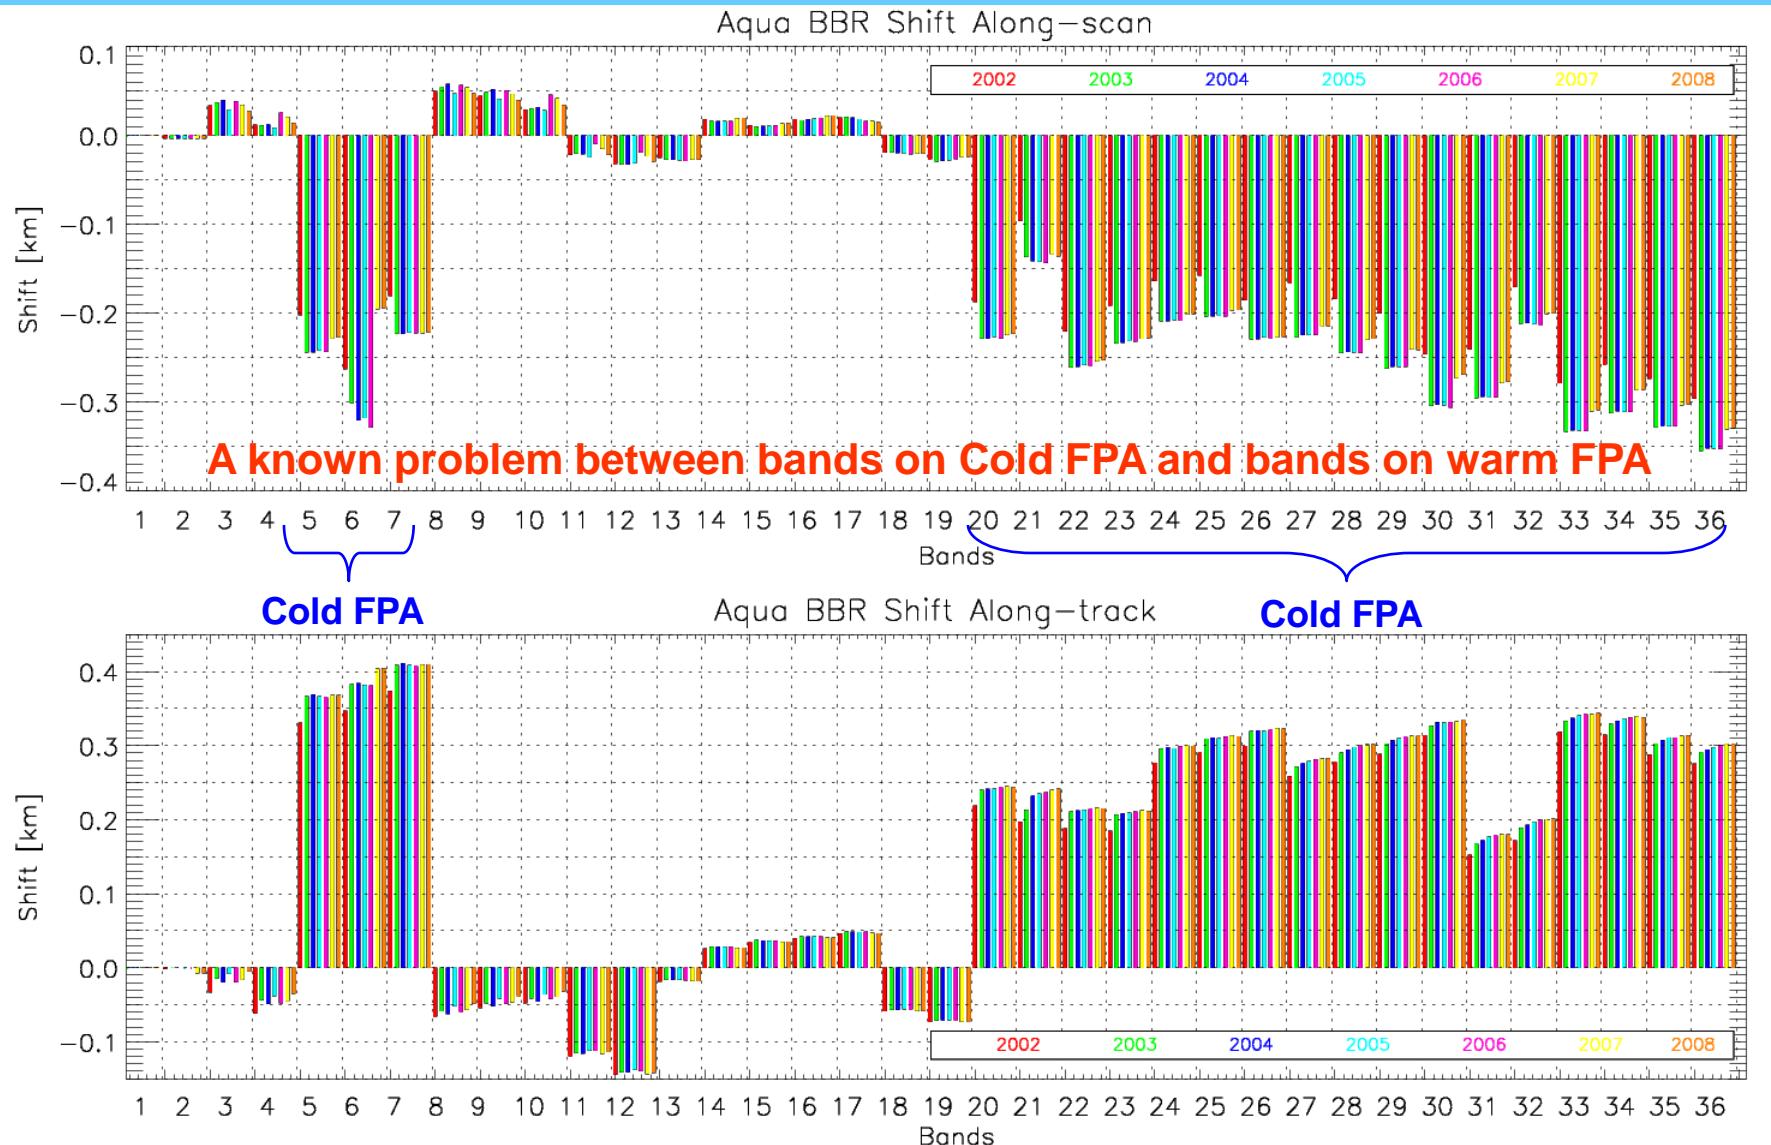

# Aqua MODIS Spectral Characterization Results

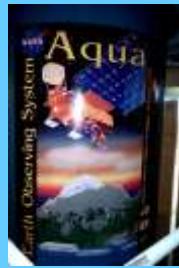

# Terra MODIS Spatial Characterization Results

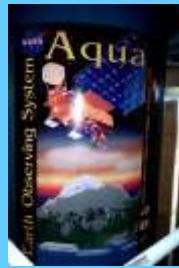

# Aqua MODIS Spatial Characterization Results

# Future Work

- MSCN impact on PC bands 33-36
  - Limited progresses made
- Improvement of B21 calibration
  - Preliminary results show scan-to-scan calibration is an alternative approach
- TEB calibration source long-term drifting (progress made)
  - On-orbit changes of BB temperature and emissivity?
- Update on-orbit calibration uncertainty
  - Time dependent
- Calibration consistency between Terra and Aqua MODIS
  - RSB and TEB — e.g. some evidence that band 1 & 2 differences are growing and affects NDVI, polarization effects Terra versus Aqua
- Cross-sensor calibration of MODIS with other sensors
  - Approaches developed and limited effort and progress made; e.g., MODIS and AIRS, MODIS and MISR, etc.

# Summary

- Both Terra (~8.5 years) and Aqua MODIS (~6 years) have shown satisfactory operation and performance
  - Key on-board calibrators continue to function well
  - Overall performance of Aqua MODIS is better than Terra MODIS
- Collection 6 issues have been identified with implementation plan and progresses made
  - Coordination (issues and schedule) with science groups is required
- Large optics (SD and scan mirror) degradation remains challenging
  - Detector dependent RVS will be applied in C6
  - **Polarization correction parameters are proposed for C6**
- Continuous effort must be made to maintain instrument calibration and data quality, including Terra and Aqua MODIS calibration consistency
  - In addition to MCST effort, input and support from science groups, instrument vendor (SBRS), and other expertise are needed

## **MODIS Data Production and Archiving**

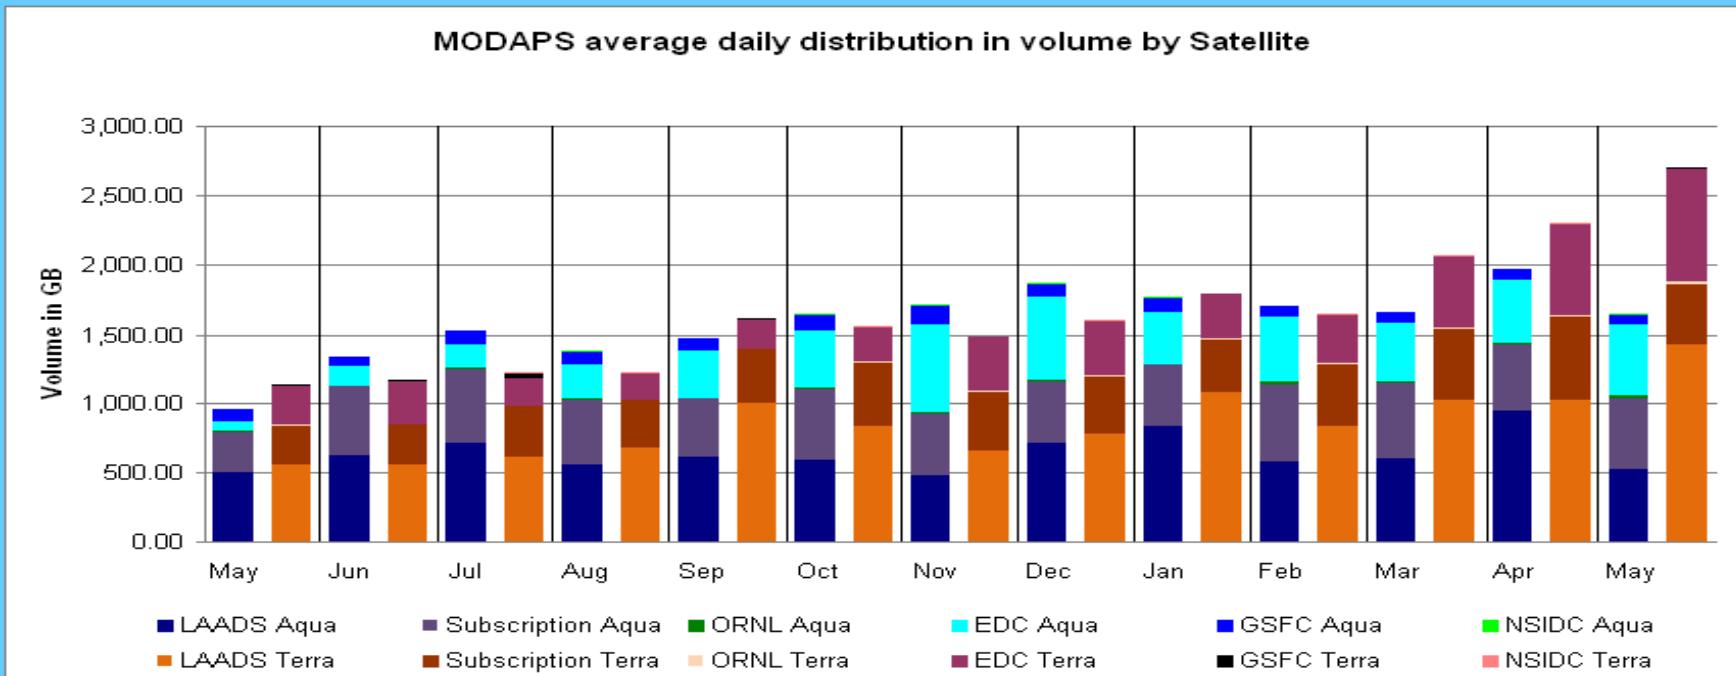

**MODIS data are produced, archived and distributed by 4 separate, distributed systems; i.e.,**

- the Goddard MODIS Adaptive Processing system that produces all Level 1 products leading to all land and atmospheres products, archives these products and distributes them to the public
- the Goddard Ocean Color Data Processing System (OCDPS) produces archives and distributes all ocean-related products (ocean color, SST) to scientists and the public
- the U.S.G.S. Land Processes Distributed Active Archive Center (DAAC) in Sioux Falls, SD archives and distributes all MODIS land products (except cryosphere products)
- the National Snow and Ice Data Center (NSIDC) in Boulder, Colorado archives and distributes all MODIS cryosphere (snow and ice) products

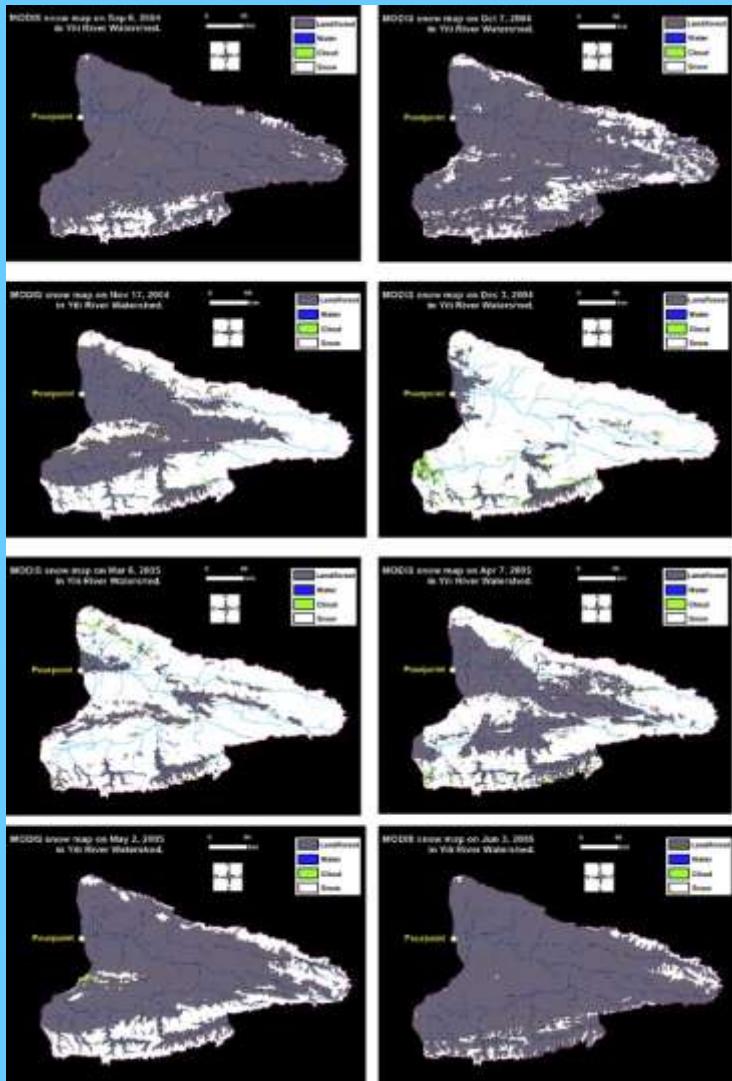

**Collection 5 is nearly finished!!**

**At present the amount of MODIS Level 0 data coming from the two MODIS Instruments is ~0.14 Terrabytes per day (“input”) and ~3.5-4 Terrabytes of data in the form of geophysical products is being distributed to the Public (“output”)**

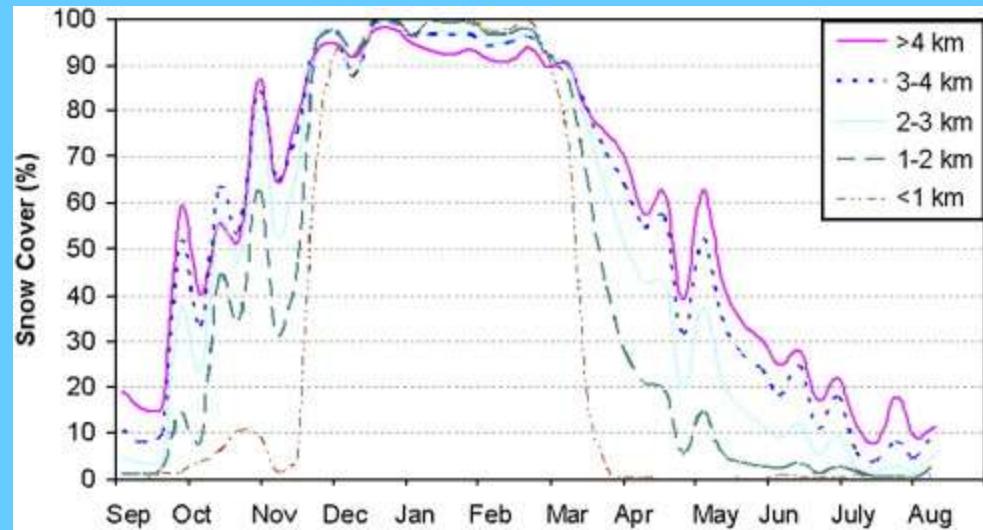

# Example: Some MODAPS Specifics

Note: MODAPS, for example, archives or creates on demand a total of  $86\text{GB/day}+165\text{GB/day}= 251\text{GB/day}$  and 2,054 files/day. MODAPS in April shipped 2,400GB/day and 163,000 files/day to the Public. This equates to roughly 10x the volume archived and 80x the number of files archived.

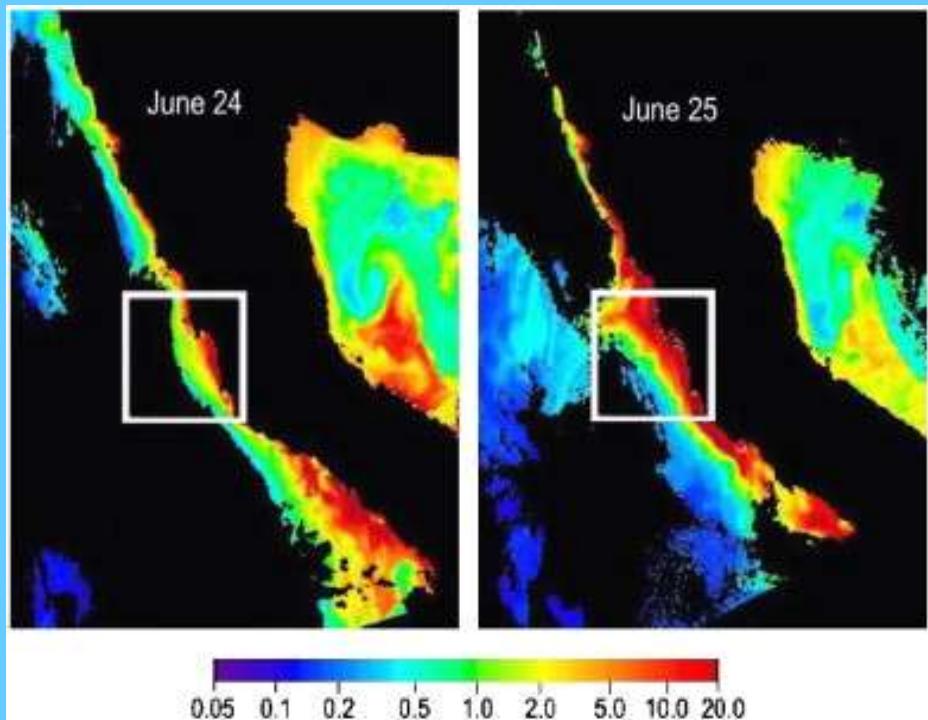

Snow coverage in the Ili River Watershed in 2004–2005 hydrologic year.

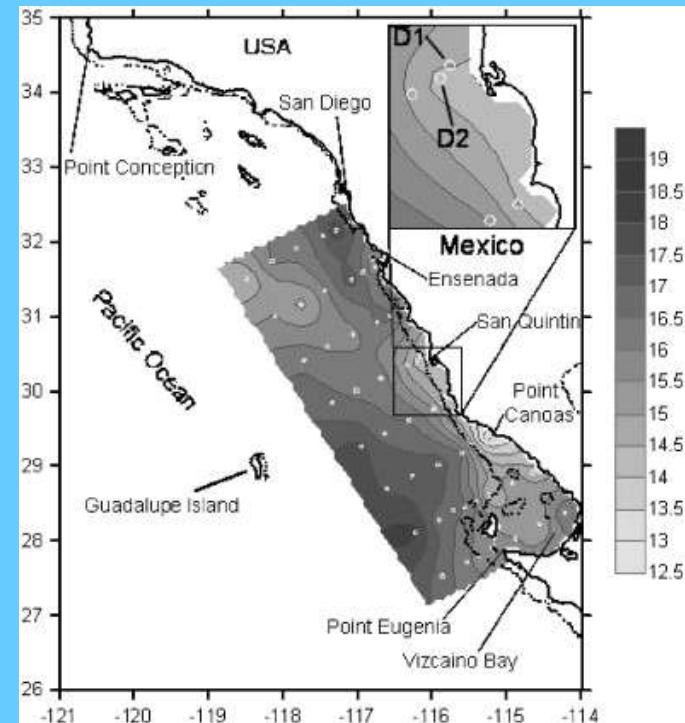

Mean snow area extent at different elevations in the Ili River Watershed during 2000–2001 to 2005–2006 hydrologic years.

## **SOME THOUGHTS ABOUT THE FUTURE**

- COLLECTION 6 FOR LEVEL 1, ATMOSPHERES, and LAND IS COMING UP—NEED INVOLVEMENT OF ALL TEAM MEMBERS TO ENSURE THAT THIS REPROCESSING GOES WELL. OCEANS WILL CONTINUE TO REPROCESS AS NEEDED.**
- ANOTHER SENIOR REVIEW FOR TERRA AND AQUA WILL OCCUR IN 2009—NEED GOOD RESULTS TO KEEP COMING TO SHOW THE VALUE OF CONTINUING MISSIONS INCLUDING MODIS**
- NPP&NPOESS VIIRS IS EMERGING. THIS IS VERY EXCITING IN TERMS OF CONTINUING THE IMPACT OF MODIS-LIKE PRODUCTS FOR GLOBAL STUDIES INTO THE FUTURE. CONTINUED EVALUATION AND STUDY OF PRODUCTS INCLUDING THE IMPORTANCE OF REPROCESSING NEEDS TO BE KEPT IN MIND.**

## OVERALL SUMMARY

- TERRA AND AQUA MODIS INSTRUMENTS WORKING WELL AFTER 6-8 YEARS
- EXCELLENT MODIS PRODUCTS HAVE BEEN DEVELOPED AND ARE INCREASINGLY USED FOR SCIENCE AND APPLICATIONS
- DATA PRODUCTS ARE BEING PROCESSED, ARCHIVED AND DISTRIBUTED WELL
- DIRECT BROADCAST OF MODIS PRODUCTS A GREAT SUCCESS
- THE FUTURE BEYOND MODIS LOOKS PROMISING WITH NPP/NPOESS VIIRS
